

Assignment - 02.

Q3.

→

`id()` returns the unique identity (memory address) of an object.

→ Immutable objects may have same `id()`.

→ Mutable objects usually have diff `id()`..

Q4.

→

`getsizeof()` returns the memory occupied by an object in bytes

Diff. data types have different sizes / amount of memⁱⁿ

Q5.

→

`a = 10`

`b = 10`

`print (id(a) == id(b))`

{ both would have same address cache.

Output : True.

Q7.

→

`input()` reads user input as text, so it always returns a String.

To use it as another data type, convert it using functions like `int()`, `float()`, `bool()`.

Q8.

→

Output : `<class 'str'>`

Q10.

→

Output : 1020
30.
